

Battle Management System

Battle C4I Battle System focus on Command & Control process, covering all levels from the individual soldier to the top (planning) levels of military command structure. It covers Sensor & Weapons integration, GIS navigation and mapping system, Communications suits, and integrated training tools. MIL C4I software is designed on true mission requirements, and feedback from the soldiers. MIL software can act as a true force multiplier when used in correct manner. Command and control refers to the ability of military commanders to direct forces. The addition of communications to the grouping reflects the fact that communications is required to enable this coordination. In modern warfare, computers are also a key component.
